

# Separating and Storing Vaccine Stock

## Identify Vaccine Stock

There are four overall types of vaccine stock.

1. Pediatric State-Supplied Order Set (PED)
2. Adult State-Supplied Order Set (ADU)
3. Blended State-Supplied Order Set
4. Privately Purchased

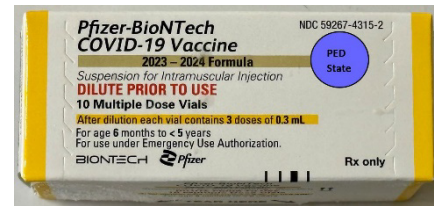

The funding type for each state-supplied vaccine is in VacTrAK on the Order Details Page. The vaccine depot can help identify state order sets if needed. All orders will come in separate shipments and need to be stored appropriately.

## Stock Separation/Unit Organization

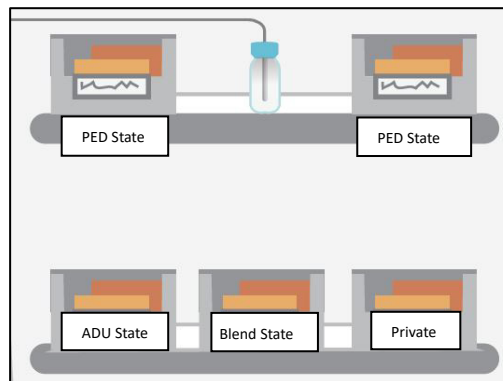

When you receive in your order, make sure that you physically mark the vaccine box identifying it as state pediatric, adult, or blended order set vaccine.

Here are two suggestions:

- Put distinct color stickers on each box for pediatric, adult, and blended vaccines.
- Mark PED or ADU on the box.

## Storing in Unit

Label the storage unit shelf

Or

Label the bins and ensure the vaccine are put in the proper bin.

For more information regarding separate order sets, see Stock Separation Guide.
