

## 2012 Annual (January–December) Infectious Disease Report

Confirmed and probable cases of infectious diseases reported to the Alaska Section of Epidemiology (SOE) from January 1 through December 31, 2012 are presented in the table below. This table includes both military and civilian reports. Cases without a known onset date were attributed to the date of specimen collection, diagnosis, or report to SOE, whichever was earliest. National reporting standards assign cases to the patient's state of residence (case definitions are available at: http://wwwn.cdc.gov/nndss/).

Because not all reportable conditions are diagnosed or reported, these figures represent trends for some diseases rather than the actual incidence or burden of disease in Alaska. There were no cases of several reportable diseases; for a complete list of diseases mandated by regulation to be reported to Alaska public health authorities is available online (available at: http://www.epi.alaska.gov/pubs/conditions/). A supplemental report showing 5-year trend data and disease summaries for select reportable conditions is available at: http://www.epi.alaska.gov/id/reports/ID\_Summary\_2008-2012.pdf

Population estimates as of July 1, 2012	392,643		80,750		115,114		27,312		74,423		42,056		732,298	

## Notes:

\*Counts are provisional and may be updated as additional data become available.

†Individuals reported during this period for the first time with HIV or AIDS.

\$AIDS and HIV annual totals include cases that were first diagnosed out-of-state and subsequently reported to the Section of Epidemiology because the patient sought care in Alaska.

Annual case counts include illnesses diagnosed in Alaska in patients for whom official residence was unknown; therefore statewide totals may not equal the sum by region.

\*\*Most infections were acquired in Alaska; however, there are some infectious pathogens that are not known to be naturally present in Alaska.
